Addressing market needs

Market needs:

- broadband to service spots, public administration in rural areas
- back-up broadband to mission critical operations (financial institutions)
- defence

Not-spots in Hungary:

500-700 settlements (small villages) out of 3200 have no sufficient broadband coverage

Positioning Satellite within Hungary's Broadband Strategy

Hungary does not have a national broadband strategy

The only valid and relevant document:
„Broadband Development Concept”

Satellite is mentioned once in this document,
when quoting a European survey
on broadband user satisfaction

Promise of the government: by the middle of 2013 a national
infocom strategy will be completed which will also include a
national broadband strategy
